5. Voorgeschiedenis / context 6. Samenvatting/ toelichting	<p>1. Meting Informatieveiligheidsstandaarden voorjaar 2022</p> <p>Dit agendapunt is doorgeschoven uit de ingekorte vergadering van 22 september jl. [bijlagen 1a. rapport en 1b. individuele detailresultaten]</p> <p>Overheidsbreed zijn afspraken gemaakt om moderne internetstandaarden voor websites en e-mail versneld te adopteren. Forum Standaardisatie meet op verzoek van het Overheidsbreed Beleidsoverleg Digitale Overheid (OBDO) halfjaarlijks de implementatievoortgang van deze afspraken. De afgesproken uiterlijke implementatiedata zijn voor alle standaarden al verstrekken, waardoor verwacht mag worden dat alle webapplicaties en e-mailsystemen deze standaarden correct toepassen. In dit document wordt gerapporteerd over de stand van zaken per mei 2022.</p>

	<p>Overheden die internetdomeinen niet veilig configureren nemen onnodige risico's. Het gaat daarbij om een verhoogde kans op phishing uit naam van overheidsorganisaties, en een verhoogde kans op manipulatie en afluisteren van web- en e-mailverkeer. Een prominent voorbeeld van de gevolgen van onveilige configuratie van standaarden is een incident van e-mailphishing namens @overheid.nl in 2018, toen van 200 burgers DigiD-inloggegevens zijn buitgemaakt.</p> <p>De meting laat zien dat bij 53% van de internetdomeinen alle verplichte websitesstandaarden correct zijn toegepast. Het gaat om belangrijke beveiligingsstandaarden voor vertrouwelijk webverkeer, en IPv6 voor duurzame bereikbaarheid van online diensten.</p> <p>Bij 44% van de internetdomeinen zijn alle verplichte e-mailstandaarden correct toegepast. Hier gaat het om belangrijke beveiligingsstandaarden om e-mailvervalsing uit naam van de overheid te voorkomen en het e-mailverkeer vertrouwelijk te houden, en ook IPv6 voor duurzame bereikbaarheid van online diensten.</p> <p>Met de meting zijn in totaal 2584 overheidsdomeinen gecontroleerd. Dat is een uitbreiding ten opzichte van voorgaande metingen, in de voorgaande meting zijn 559 overheidsdomeinen gecontroleerd. De 2584 overheidsdomeinen zijn slechts een deelwaarneming van alle overheidsdomeinen, het totaalportfolio heeft vele duizenden meer domeinen. De overheid heeft als geheel geen zicht op het totaalportfolio. Dit rapport toont met diverse doorsneden inzicht in de stand van zaken per overheidscategorie en per ministerie. De mate van adoptie kan gezien worden als een indicator voor de effectiviteit van sturing op kwaliteit van de informatievoorziening.</p> <p>Op verzoek van het OBDO is in de samenvatting een 'naming & shaming'-volgorde toegepast.</p> <p>Het Forum Standaardisatie licht regelmatig in gremia zowel de resultaten van de IV-meting als van de Monitor open standaarden toe en de afspraken die hierover in OBDO zijn gemaakt (streefbeeldafspraken, 'pas toe of leg uit' overheidsbreed van toepassing). Zo is voorzitter Larissa Zegveld recent bij het CIO Beraad (16 november) en CTO-raad (2 november) geweest voor toelichting en uitleg.</p> <p>2. Mutaties 'pas toe of leg uit'-lijst [bijlagen 2a. COINS en 2b. OWMS]</p> <p>a. standaard COINS (gegevensuitwisseling in de bouw) niet meer verplichten of aanbevelen aan de overheid via verwijdering van de 'pas toe of leg uit'-lijst</p> <p>COINS is een standaard voor uitwisselen van samenhangende digitale bouwinformatie tussen opdrachtgevers en opdrachtnemers, zoals functies, GISdata of 2D tekeningen. Dankzij deze standaard kunnen opdrachtgevers en opdrachtnemers in de bouw die software van verschillende leveranciers gebruiken, gemakkelijker samenwerken.</p> <p>COINS heeft echter end of life-status bereikt. De beheerorganisatie BIM-Loket doet geen investeringen meer in de doorontwikkeling en in het beheer van de standaard.</p> <p>Vanuit gebruikersperspectief neemt draagvlak voor de standaard af en stakeholders zoals Rijkswaterstaat en Provincie Gelderland bouwen het gebruik van COINS af. De betrokken experts bij de toetsingsprocedure signaleren dat (internationale)</p>
--	---

	<p>opvolgers beschikbaar zijn en adviseren het BIM-Loket deze opvolgers aan te melden voor de 'pas toe of leg uit'-lijst van Forum Standaardisatie. Ook het BIM-Loket adviseert internationale opvolgers te gebruiken en biedt de bouwcommunity ondersteuning aan.</p> <p>Het niet meer verplichten van een standaard via verwijdering van de 'pas toe of leg uit'-lijst betekent dat een standaard niet voldoet aan criteria van Forum Standaardisatie voor opname op de lijst. De standaard kan wel gebruikt blijven.</p> <p>Juridische consequenties verwijdering COINS voor langlopende contracten</p> <p>De verwijdering van COINS heeft geen juridische consequenties op langlopende contracten waarin COINS werd uitgevraagd. Dat heeft Rijkswaterstaat (hierna: RWS) bevestigd. RWS is binnen de overheid een van de gebruikers van de standaard COINS. Het Bureau Forum Standaardisatie heeft deze vraag rond juridische consequenties uitgezet bij RWS op advies van het Forum Standaardisatie.</p> <p>b. standaard OWMS (openbaarheid en toegang overheidsinformatie) niet meer verplichten of aanbevelen aan de overheid via verwijdering van de 'pas toe of leg uit'-lijst</p> <p>OWMS draagt bij aan meer toegang en openbaarheid van gepubliceerde overheidsinformatie (zoals artikelen, kamerstukken en bekendmakingen), doordat burgers en bedrijven overheidsinformatie beter kunnen vinden en interpreteren middels eenduidige beschrijving en ordening.</p> <p>OWMS heeft echter end of life-status bereikt. De beheerorganisatie KOOP (Kennis- en Exploitatiecentrum Officiële Overheidspublicaties) doet geen investeringen meer in de doorontwikkeling en in het beheer van de standaard. Er is geen draagvlak voor het gebruik van OWMS voor nieuwe toepassingen omdat KOOP OWMS gaat vervangen voor de nieuwe standaard Thesaurus en Ontologie OverheidsInformatie (TOOI).</p> <p>De betrokken experts bij de toetsingsprocedure adviseren om duidelijk te communiceren dat de standaard na verwijdering nog steeds gebruikt kan worden. Zij adviseren daarnaast de beheerorganisatie KOOP in het bijzonder om te communiceren dat KOOP werkt aan de opvolger (TOOI).</p> <p>Het niet meer verplichten van een standaard via verwijdering van de 'pas toe of leg uit'-lijst betekent dat een standaard niet voldoet aan criteria van Forum Standaardisatie voor opname op de lijst. De standaard kan wel gebruikt blijven.</p>
7. Beslispunten/ discussiepunten	<p>1. Meting Informatieveiligheidsstandaarden voorjaar 2022</p> <p>Het OBDO neemt kennis van de 'Meting Informatieveiligheidstandaarden voorjaar 2022' en vraagt de CIO Rijk en de koepelorganisaties van de decentrale overheden om de rapportage en adviezen via de CISO- en de CIO-lijn actief onder de aandacht te brengen van individuele organisaties binnen hun achterban en hen op te roepen tot verbetering.</p> <p>Daarbij verzoekt OBDO aan de CIO Rijk en de koepelorganisaties om te onderzoeken hoe richting hun achterban voor de opvolging van de adviezen een stimulerende en faciliterende rol te kunnen vervullen en ook na te gaan welke (delen van de) adviezen overheidsbreed via de OBDO-lijn opgepakt zouden moeten worden (bijvoorbeeld via de lijn van de Architectuurraad).</p>

	<p>De CIO Rijk en de koepels van de decentrale overheden worden gevraagd in een volgend OBDO-overleg terug te koppelen over hun opvolging hierin.</p> <p>Advies 1: onderzoek welke <u>sturingsmechanismen</u> kunnen worden ingezet om overheidsbrede architectuurafspraken en kwaliteitseisen (beleid) – bijvoorbeeld in de vorm van gemeenschappelijke standaarden en streefbeeldafspraken – effectief te laten landen in de uitvoering bij de individuele overheidsorganisaties (<u>implementatie</u>).</p> <p>Advies 2: organiseer <u>regie op internetdomeinen</u> binnen ministeries en individuele overheidsorganisaties. Jaag dit initieel project- of programmatisch aan, en borg dit vervolgens in de lijnorganisatie.</p> <p>Advies 3: verken of het <u>centrale dienstverleningsconcept</u> rond DNS-beheer van de Rijksoverheid ook kan worden ingezet bij decentrale overheden.</p> <p>Advies 4: zorg ervoor dat <u>naleving van IT-kwaliteitseisen</u> – waaronder ondersteuning van <u>verplichte open standaarden</u> – onderdeel zijn van het <u>leveranciersmanagement</u> van individuele overheidsorganisaties. Vraag leveranciers periodiek naar de planning voor ondersteuning van standaarden. Overweeg om over te stappen als een leverancier onvoldoende meebeekt.</p> <p>2. Mutaties 'pas toe of leg uit'-lijst</p> <p>a. standaard COINS (gegevensuitwisseling in de bouw)</p> <p>Het OBDO stemt in met</p> <ul style="list-style-type: none"> ○ standaard COINS (gegevensuitwisseling in de bouw) niet meer verplichten of aanbevelen aan de overheid via verwijdering van de 'pas toe of leg uit'-lijst <p>b. standaard OWMS (openbaarheid en toegang overheidsinformatie)</p> <p>Het OBDO stemt in met</p> <ul style="list-style-type: none"> ○ standaard OWMS (openbaarheid en toegang overheidsinformatie) niet meer verplichten of aanbevelen aan de overheid via verwijdering van de 'pas toe of leg uit'-lijst

- 7.4. Wat wordt niet gemeten* 40
- 7.5. Over de standaarden* 40
 - 7.5.1. Webstandaarden* 40
 - 7.5.2. E-mailstandaarden* 42

Bijlage: individuele resultaten per internetdomein

Leeswijzer

Dit rapport is piramidaal gestructureerd en begint in hoofdstuk 1 met de conclusies, adviezen, en het totaalbeeld.

Hoofdstukken 2 en 3 gaan in op het algehele beeld rond de adoptie van respectievelijk websitebeveiligingsstandaarden en e-mailbeveiligingsstandaarden.

Hoofdstuk 4 gaat in op de adoptie van IPv6 voor websites en e-mail.

Hoofdstuk 5 en 6 gaan dieper in op de adoptiegraad per standaard van respectievelijk de verschillende overheidscategorieën en ministeries.

Hoofdstuk 7 beschrijft de achtergrond van de meting, waaronder de beleidmatige afspraken, desbetreffende standaarden en de methodiek.

De bijlagen geven detailinzicht per internetdomein, gecategoriseerd naar overheidscategorie of ministerie.

1. Samenvatting

Overheidsbreed zijn [afspraken](#) gemaakt om moderne internetstandaarden voor websites en e-mail versneld te adopteren. Forum Standaardisatie meet op verzoek van het Overheidsbreed Beleidsoverleg Digitale Overheid (OBDO) halfjaarlijks de implementatievoortgang van deze afspraken. De afgesproken uiterlijke implementatiedata zijn voor alle standaarden al verstrekken, waardoor verwacht mag worden dat alle webapplicaties en e-mailsystemen deze standaarden correct toepassen. In dit document wordt gerapporteerd over de stand van zaken per mei 2022.

Overheden die internetdomeinen niet veilig configureren nemen onnodige risico's. Het gaat daarbij om een verhoogde kans op phishing uit naam van overheidsorganisaties, en een verhoogde kans op manipulatie en afluisteren van web- en e-mailverkeer. Een prominent voorbeeld van de gevolgen van onveilige configuratie van standaarden is een [incident van e-mailphishing](#) namens @overheid.nl in 2018, toen van 200 burgers DigiD-inloggegevens zijn buitgemaakt.

De meting laat zien dat bij 53% van de internetdomeinen alle verplichte websitesstandaarden correct zijn toegepast. Het gaat om belangrijke beveiligingsstandaarden voor vertrouwelijk webverkeer, en IPv6 voor duurzame bereikbaarheid van online diensten.

Bij 44% van de internetdomeinen zijn alle verplichte e-mailstandaarden correct toegepast. Hier gaat het om belangrijke beveiligingsstandaarden om e-mailvervalsing uit naam van de overheid te voorkomen en het e-mailverkeer vertrouwelijk te houden, en ook IPv6 voor duurzame bereikbaarheid van online diensten.

Met de meting zijn in totaal 2584 overheidsdomeinen gecontroleerd. Dat is een uitbreiding ten opzichte van voorgaande metingen, in de voorgaande meting zijn 559 overheidsdomeinen gecontroleerd. De 2584 overheidsdomeinen zijn slechts een deelwaarneming van alle overheidsdomeinen, het totaalportfolio heeft vele duizenden meer domeinen. De overheid heeft als geheel geen zicht op het totaalportfolio. Dit rapport toont met diverse doorsneden inzicht in de stand van zaken per overheidscategorie en per ministerie. De mate van adoptie kan gezien worden als een indicator voor de effectiviteit van sturing op kwaliteit van de informatievoorziening.

1.1. Adviezen

Zeven jaar na het maken van de eerste streefbeeldafspraak, en ruim twee jaar na het maken van de laatste, is geen van de streefbeelden voor de overheid als geheel gehaald. Het ontbreekt aan effectieve sturingsmechanismen om overheidsbrede afspraken eenduidig te laten landen en nageleefd te krijgen binnen individuele overheidsorganisaties. Zodra de Wet Digitale Overheid van kracht wordt kunnen standaarden wettelijk worden verplicht, zoals

reeds is voorgenomen met HTTPS en HSTS. Ook hier speelt de vraag hoe deze verdergaande verplichtingen de operationele werkvlak bereiken, en hoe vervolgens gestuurd wordt op naleving van de verplichtingen.

Advies 1: onderzoek welke sturingsmechanismen kunnen worden ingezet om overheidsbrede architectuurafspraken en kwaliteitseisen (beleid) – bijvoorbeeld in de vorm van gemeenschappelijke standaarden en streefbeeldafspraken – effectief te laten landen in de uitvoering bij de individuele overheidsorganisaties (implementatie).

Positieve uitschieters binnen overheidscategorieën en tussen ministeries zijn vaak te verklaren vanuit proactieve sturing (regie) op de toepassing van standaarden, bijvoorbeeld vanuit een CIO- of CISO-office (voorbeelden: CIO BZK en CISO VWS). Proactieve sturing op de omvang en kwaliteitsaspecten van het internetdomeinportfolio is noodzakelijk om risico's voor zowel organisaties als burgers te kunnen beheersen. Als handreiking heeft Forum Standaardisatie [vijf basisprincipes voor regie op internetdomeinen](#) op een rij gezet. Voor de Rijksoverheid heeft het Rijksprogramma voor Duurzaam Digitale Informatiehuishouding (RDDI), in samenwerking met Forum Standaardisatie, in 2021 de [Handreiking Beheer Internetdomeinen Rijksoverheid](#) gepubliceerd.

Het komt regelmatig voor dat websites of e-maildiensten decentraal ingekocht worden, terwijl er centrale (overheids)dienstverlening bestaat waarmee dezelfde diensten efficiënter geleverd kunnen worden. Met regie op internetdomeinen kan er beter op gestuurd worden dat centrale dienstverlening ook wordt benut.

Advies 2: organiseer regie op internetdomeinen binnen ministeries en individuele overheidsorganisaties. Jaag dit initieel project- of programmamatig aan, en borg dit vervolgens in de lijnorganisatie.

Centralisering van dienstverlening heeft veelal een positief effect op de toepassing van standaarden. Wanneer een gemeenschappelijke dienstverlener een standaard consequent toepast heeft dit een hefboomeffect. Dit is zichtbaar bij diverse dienstverleningsconcepten; bijvoorbeeld de centrale registrarrol die de Dienst Publiek en Communicatie (AZ/DPC) vervult voor de Rijksoverheid, maar ook bij gemeenschappelijke dienstverleners voor web en e-maildiensten, zoals SSC-ICT, DICTU en diverse regionale dienstverleners.

Advies 3: verken of het centrale dienstverleningsconcept rond DNS-beheer van de Rijksoverheid ook kan worden ingezet bij decentrale overheden.

Overheden besteden hun e-mailvoorzieningen steeds vaker uit aan clouddienstverleners. Een aantal van dit soort dienstverleners ondersteunen niet alle verplichte standaarden. Conform het open standaardenbeleid zou formeel moeten worden gekozen voor dienstverlening die de

standaarden wel ondersteunt. Indien hiervan is afgeweken is het belangrijk dat overheden hun dienstverleners alsnog blijven vragen om ondersteuning van verplichte standaarden. Diverse dienstverleners geven in informele gesprekken aan dat een gebrek aan klantvraag een reden is om niet te investeren in ondersteuning van de voor overheid verplichte standaarden.

Advies 4: zorg ervoor dat naleving van IT-kwaliteitseisen – waaronder ondersteuning van verplichte open standaarden – onderdeel zijn van het leveranciersmanagement van individuele overheidsorganisaties. Vraag leveranciers periodiek naar de planning voor ondersteuning van standaarden. Overweeg om over te stappen als een leverancier onvoldoende meebeweegt.

1.2. Websitestandaarden

1.2.1. Totaalbeeld websites per overheidscategorie (incl. IPv6)

Onderstaande cijfers laten zien in welke mate de verschillende overheidscategorieën *alle* afgesproken websitestandaarden voor veilig en modern webverkeer toepassen (inclusief IPv6). Gemeenten en waterschappen lopen gemiddeld gezien ver voor op de andere categorieën. De gemeenschappelijke regelingen lopen ver achter. Waarschijnlijk zijn de streefbeeldafspraken niet doorgesijpeld naar deze instanties, hoewel zij in veel gevallen gefinancierd worden vanuit de andere overheden.

Hoofdstuk 2 gaat in meer detail in op de specifieke websitebeveiligingsstandaarden, hoofdstuk 4 gaat in op IPv6.

1.2.2. Websitebeveiligingsstandaarden (excl. IPv6)

Door toepassing van websitebeveiligingsstandaarden wordt de verbinding met overheidswebsites beter beveiligd, zodat criminelen niet zomaar uitgewisselde gegevens kunnen onderscheppen of manipuleren.

Deze paragraaf laat het totaalbeeld per overheidscategorie en het totaalbeeld per ministerie zien (zonder IPv6).

1.2.2.1. Adoptie per overheidscategorie

De achterblijvers zijn met name te vinden bij de centrale overheid en de gemeenschappelijke regelingen. De centrale overheid is getalsmatig oververtegenwoordigd in de meting doordat er veel secundaire internetdomeinen (campagnesites, projectsites, etc.) zijn meegenomen. Er is geen goed beeld van secundaire internetdomeinen van decentrale overheden, hoewel we weten dat gemeenten wel honderden websites in beheer kunnen hebben.

Voor meer details per overheidscategorie zie hoofdstuk 5.

1.2.2.2. Adoptie per ministerie

Wanneer wordt gekeken naar de verschillende ministeries – inclusief de instanties die onder hun beleidsverantwoordelijkheid vallen – dan vallen de ministeries van Infrastructuur en Waterstaat (36%), Landbouw, Natuur en Voedselkwaliteit en Economische Zaken en Klimaat (beide 47%), en Justitie en Veiligheid en Onderwijs, Cultuur en Wetenschap (beide 53%) in negatieve zin op.

Voor meer details per ministerie zie hoofdstuk 6.

1.3. E-mailstandaarden

1.3.1. Totaalbeeld e-mail per overheidscategorie (incl. IPv6)

Onderstaande cijfers laten zien in welke mate de verschillende overheidscategorieën *alle* afgesproken websitesstandaarden voor veilig en modern e-mailverkeer (inclusief IPv6) toepassen. De centrale overheid loopt voorop in de toepassing van deze standaarden. Dat komt met name door een hoge mate van gebruik van gemeenschappelijke dienstverleners die de standaarden correct toepassen. Lokale overheden lopen achter, enerzijds komt dit door een hogere mate van gebruik van clouddiensten die niet alle standaarden ondersteunen. Anderzijds zal bij gemeenschappelijke regelingen het gebrek aan bewustzijn een rol spelen.

Hoofdstuk 3 gaat in meer detail in op de specifieke e-mailbeveiligingsstandaarden, hoofdstuk 4 gaat in op IPv6.

1.3.2. E-mailstandaarden voor bestrijding van phishing (excl. IPv6)

Door toepassing van e-mailstandaarden voor het bestrijden van phishing wordt e-mailverkeer met de overheid beter beveiligd, zodat criminelen niet zomaar overheidsdomeinen kunnen misbruiken als afzenddomein voor bijvoorbeeld phishing-aanvallen.

Deze paragraaf laat het totaalbeeld per overheidscategorie en het totaalbeeld per ministerie zien (zonder IPv6).

1.3.2.1. Adoptie per overheidscategorie

De waterschappen en gemeenten zijn positieve uitschieters in deze categorie. Wel gaat het bij deze categorieën voornamelijk om primaire domeinnamen. Er is geen inzicht in secundaire domeinnamen die in gebruik zijn, die waarschijnlijk gezamenlijk in de duizenden lopen. De gemeenschappelijke regelingen, waar lokale overheden vaak in participeren, scoren slecht met 40% goed geconfigureerde e-maildomeinen.

Voor meer details per overheidscategorie zie hoofdstuk 5.

1.3.2.2. Adoptie per ministerie

Wanneer wordt gekeken naar de verschillende ministeries – inclusief de instanties die onder hun beleidsverantwoordelijkheid vallen – dan vallen de ministeries van Algemene Zaken (96%) en Sociale Zaken en Werkgelegenheid (83%) positief op. Bijna alle ministeries met een portfolio kleiner dan 100 internetdomeinen scoren rond de 70% en hoger. Positieve opvaller met een portfolio groter dan 100 internetdomeinen is het ministerie van Binnenlandse Zaken met 71% volledige adoptie van anti-phishing standaarden voor haar portfolio van 319 gecontroleerde internetdomeinen. De ministeries van Justitie en Veiligheid (53%), Onderwijs, Cultuur en Wetenschap (55%), en Infrastructuur en Waterstaat (56%), hebben nog veel werk te verzetten om e-mailvervalsing namens haar domeinnamen te voorkomen.

Voor meer details per ministerie zie hoofdstuk 6.

1.3.3. E-mailstandaarden voor vertrouwelijk e-mailverkeer (excl. IPv6)

Door toepassing van e-mailstandaarden voor vertrouwelijk e-mailverkeer wordt e-mailverkeer met de overheid beter beveiligd, zodat criminelen niet zomaar e-mails kunnen onderscheppen of manipuleren.

Omdat we alleen kunnen testen of de e-mailontvangst van de betreffende overheden voldoende veilig e-mailverkeer mogelijk maakt, hebben we internetdomeinen zonder een

ontvangende mailserver niet meegenomen in de statistieken. Hierdoor is het aantal gecontroleerde domeinen minder dan bij de standaarden voor bestrijding van phishing.

Deze paragraaf laat het totaalbeeld per overheidscategorie en het totaalbeeld per ministerie zien (zonder IPv6).

1.3.3.1. Adoptie per overheidscategorie

De centrale overheid en gemeenten scoren over het algemeen het beste op deze standaarden. Het gebruik van gemeenschappelijke e-maildienstverleners geeft daarbij een hefboomeffect. Lokale overheden maken veel meer gebruik van clouddiensten voor e-mailverkeer, die de standaarden DNSSEC en DANE over het algemeen niet ondersteunen. Dit is met name zichtbaar in de adoptiegraad bij provincies, gemeenschappelijke regelingen en waterschappen.

Voor meer details per overheidscategorie zie hoofdstuk 5.

1.3.3.2. Adoptie per ministerie

Wanneer wordt gekeken naar de verschillende ministeries – inclusief de instanties die onder hun beleidsverantwoordelijkheid vallen – dan valt op dat ministeries die actief sturen op toepassing van standaarden beter scoren, zoals de ministeries van Volksgezondheid, Welzijn en Sport, Sociale Zaken en Werkgelegenheid en Binnenlandse Zaken en Koninkrijksrelaties. Ook het ministerie van Economische Zaken en Klimaat scoort relatief hoger, omdat de meeste e-mail door de huisleverancier wordt verzorgd. Het ministerie van Buitenlandse Zaken is een negatieve opvaller met slechts 8% volledige adoptie van standaarden voor veilig e-mailtransport.

Voor meer details per ministerie zie hoofdstuk 6.

2. Adoptie per websitebeveiligingsstandaard

Dit hoofdstuk toont de algehele adoptiegraad per websitebeveiligingsstandaard.

Hoofdstukken 5 en 6 gaan in meer detail in op de adoptiegraad van specifieke standaarden per respectievelijk overheidscategorie en ministerie.

Onderstaande statistieken tonen onder meer aan dat bij een kwart van de internetdomeinen de TLS- en HSTS-configuraties niet op orde zijn. Overheden moeten HTTPS en HSTS toepassen conform de [ICT-beveiligingsrichtlijnen voor webapplicaties](#), en configureren hun TLS-verbindingen conform de [ICT-beveiligingsrichtlijnen voor Transport Layer Security \(TLS\)](#) van het NCSC.

3. Adoptie per e-mailbeveiligingsstandaard

Dit hoofdstuk toont de algehele adoptiegraad per e-mailbeveiligingsstandaard.

Hoofdstukken 5 en 6 gaan in meer detail in op de adoptiegraad van specifieke standaarden per respectievelijk overheidscategorie en ministerie.

3.1. E-mailstandaarden voor bestrijding van phishing

Om phishingmails uit naam van overheidsorganisaties (inclusief bewindspersonen) te voorkomen, moet voor 28% van de internetdomeinen nog een strikt DMARC-beleid worden ingesteld. Het streefbeeld was om dit eind 2019 voor elkaar te hebben.

3.2. E-mailstandaarden voor vertrouwelijk e-mailverkeer

Bij één op de vijf e-mailservers is de STARTTLS-configuratie niet toekomstvast geconfigureerd. Overheden dienen hun TLS-verbindingen te configureren op basis van de [ICT-beveiligingsrichtlijnen voor Transport Layer Security \(TLS\)](#) van het NCSC.

DANE is de minst toegepaste standaard uit de meting met een adoptiegraad van 46%. DNSSEC bij mailserverdomein en DANE zorgen in samenhang voor geauthenticeerde versleuteling van e-mailtransport tussen de verzendende en ontvangende mailserver. Dit voorkomt dat een actieve aanvaller zomaar mailverkeer kan afluisteren.

De grootste implementatiedempel voor DNSSEC en DANE is leveranciersondersteuning door met name clouddienstverleners. Het is belangrijk dat overheden die nog niet voldoen hun leverancier blijven vragen om ondersteuning van deze standaarden.

4. Adoptie IPv6 voor websites en e-mail

IPv6 is de open internetstandaard die iedere internetgebruiker nodig heeft om ook in de toekomst onbelemmerd gebruik te kunnen maken van internet. Er zijn verschillende goede redenen om voor IPv6 te kiezen, juist ook als overheid: groei en innovatie van internet, directere en snellere dienstverlening, en tegengaan van fraude.

De overheid heeft ook een voorbeeldfunctie om moderne internetstandaarden zoals IPv6 te gebruiken. Deze standaarden zorgen er namelijk voor dat het internet nu en in de toekomst voor iedereen wereldwijd veiliger en toegankelijker wordt waardoor ook nieuwe innovatie kan plaatsvinden. Brede ondersteuning van IPv6 binnen Nederland is ook belangrijk voor onze mondiale concurrentiepositie.

4.1. IPv6 voor webverkeer per overheidscategorie

De gemeenschappelijke regelingen scoren ver onder de maat bij het gebruik van IPv6 voor webverkeer. De overheidsbrede afspraken hebben onvoldoende doorwerking gehad naar deze instanties, ondanks dat zij meestal gefinancierd worden vanuit de andere overheden.

De centrale overheid scoort relatief lager dan de andere lokale overheden. Dat komt doordat er onevenredig veel secundaire webdomeinen in deze categorie zijn meegenomen. Deze secundaire webdomeinen zijn vaak gehost bij externe dienstverleners die niet goed aangestuurd zijn op het toepassen van IPv6 voor websites en webapplicaties.

4.2. IPv6 voor webverkeer per ministerie

Positieve uitschieters – met een klein webportfolio – zijn de ministeries van Algemene Zaken (100%) en Defensie (92%). Negatieve opvaller is het ministerie van Economische Zaken (51%), terwijl dit beleidsmatig de aanjager is van IPv6 richting het bedrijfsleven. Dit ministerie heeft nog een uitdaging om de voorbeeldfunctie waar te maken.

4.3. IPv6 voor e-mailverkeer per overheidscategorie

Ook bij het gebruik van IPv6 voor e-mailverkeer scoren de gemeenschappelijke regelingen ver onder de maat met een adoptiegraad van slechts 33%. Ook de waterschappen komen daar niet ver boven met 43%. Vermoedelijk zit er voor de centrale overheid (52%) nog rek in het adoptiepercentage door ongebruikte mailservers uit de domeinconfiguratie te verwijderen.

4.4. IPv6 voor e-mailverkeer per ministerie

Wanneer wordt gekeken naar de verschillende ministeries – inclusief de instanties die onder hun beleidsverantwoordelijkheid vallen – dan valt in eerste instantie het ministerie van Defensie op, die helemaal geen IPv6 e-mailverkeer mogelijk maakt. Ook de ministeries van Buitenlandse Zaken (15%) en Algemene Zaken (20%) hebben ondanks een klein portfolio aan ontvangen e-maildomeinen een erg lage adoptiegraad.

Positieve opvallers zijn de ministeries met een proactieve (projectmatige) sturing op toepassing van standaarden. Het gaat daarbij om de ministeries van Sociale Zaken en Werkgelegenheid (77%), Volksgezondheid, Welzijn en Sport (73%), en Binnenlandse Zaken en Koninkrijksrelaties (69%).

5. Adoptie per overheidscategorie

De volgende paragrafen tonen de adoptiestatistieken per beveiligingsstandaard per overheidscategorie.

5.1. Centrale overheid

% adoptie per webbeveiligingsstandaard centrale overheid (n = 1769)

% adoptie per standaard 'anti-phishing' centrale overheid (n = 1787)

% adoptie per standaard 'veilig e-mailtransport' centrale overheid (n = 730)

5.2. Provincies

5.3. Waterschappen

5.4. Gemeenten

5.5. Gemeenschappelijke regelingen

6. Adoptie per ministerie

6.1. Totaalbeeld websitestandaarden (incl. IPv6)

Onderstaande cijfers laten zien in welke mate de verschillende ministeries – inclusief de instanties die onder hun beleidsverantwoordelijkheid vallen – *alle* afgesproken websitestandaarden voor veilig en modern webverkeer toepassen (inclusief IPv6).

Over het algemeen hebben ministeries met een klein webportfolio, zoals de ministeries van Algemene Zaken en Defensie, een hoge mate van adoptie. Ook ministeries als Buitenlandse Zaken en Financiën, met een relatief beperkt portfolio, scoren hoger dan gemiddeld. De ministeries van Binnenlandse Zaken en Volksgezondheid hebben een relatief hoge adoptiegraad afgezet tegen de hoge omvang van hun portfolio. Dit komt omdat zij in de voorgaande jaren actief (projectmatig) hebben gestuurd op toepassing van standaarden.

6.2. Totaalbeeld e-mailstandaarden (incl. IPv6)

Onderstaande cijfers laten zien in welke mate de verschillende ministeries – inclusief de instanties die onder hun beleidsverantwoordelijkheid vallen – *alle* afgesproken e-mailstandaarden voor veilig en modern e-mailverkeer toepassen (inclusief IPv6).

Vergelijkbaar met de adoptie van websitestandaarden, zien we dat ministeries met een beperkt portfolio, of actieve sturing op toepassing van standaarden, over het algemeen een hogere adoptiegraad bereiken.

De volgende paragrafen tonen de adoptiestatistieken per beveiligingsstandaard per ministerie.

6.3. Ministerie van Algemene Zaken

6.4. Ministerie van Binnenlandse Zaken en Koninkrijksrelaties

% adoptie per webbeveiligingsstandaard Ministerie van Binnenlandse Zaken en Koninkrijksrelaties (n = 315)

% adoptie per standaard 'anti-phishing' Ministerie van Binnenlandse Zaken en Koninkrijksrelaties (n = 319)

% adoptie per standaard 'veilig e-mailtransport' Ministerie van Binnenlandse Zaken en Koninkrijksrelaties (n = 80)

6.5. Ministerie van Buitenlandse Zaken

% adoptie per webbeveiligingsstandaard Ministerie van Buitenlandse Zaken
(n = 78)

% adoptie per standaard 'anti-phishing' Ministerie van Buitenlandse Zaken
(n = 78)

% adoptie per standaard 'veilig e-mailtransport' Ministerie van Buitenlandse Zaken (n = 13)

6.6. Ministerie van Defensie

6.7. Ministerie van Economische Zaken en Klimaat

% adoptie per webbeveiligingsstandaard Ministerie van Economische Zaken en Klimaat (n = 142)

% adoptie per standaard 'anti-phishing' Ministerie van Economische Zaken en Klimaat (n = 143)

% adoptie per standaard 'veilig e-mailtransport' Ministerie van Economische Zaken en Klimaat (n = 77)

6.8. Ministerie van Financiën

6.9. Ministerie van Infrastructuur en Waterstaat

% adoptie per webbeveiligingsstandaard Ministerie van Infrastructuur en Waterstaat (n = 317)

% adoptie per standaard 'anti-phishing' Ministerie van Infrastructuur en Waterstaat (n = 317)

% adoptie per standaard 'veilig e-mailtransport' Ministerie van Infrastructuur en Waterstaat (n = 119)

6.10. Ministerie van Justitie en Veiligheid

% adoptie per webbeveiligingsstandaard Ministerie van Justitie en Veiligheid (n = 214)

% adoptie per standaard 'anti-phishing' Ministerie van Justitie en Veiligheid (n = 220)

% adoptie per standaard 'veilig e-mailtransport' Ministerie van Justitie en Veiligheid (n = 110)

6.11. Ministerie van Landbouw, Natuur en Voedselkwaliteit

% adoptie per webbeveiligingsstandaard Ministerie van Landbouw, Natuur en Voedselkwaliteit (n = 82)

% adoptie per standaard 'anti-phishing' Ministerie van Landbouw, Natuur en Voedselkwaliteit (n = 83)

% adoptie per standaard 'veilig e-mailtransport' Ministerie van Landbouw, Natuur en Voedselkwaliteit (n = 37)

6.12. Ministerie van Onderwijs, Cultuur en Wetenschap

% adoptie per webbeveiligingsstandaard Ministerie van Onderwijs, Cultuur en Wetenschap (n = 132)

% adoptie per standaard 'anti-phishing' Ministerie van Onderwijs, Cultuur en Wetenschap (n = 133)

% adoptie per standaard 'veilig e-mailtransport' Ministerie van Onderwijs, Cultuur en Wetenschap (n = 77)

6.13. Ministerie van Sociale Zaken en Werkgelegenheid

% adoptie per webbeveiligingsstandaard Ministerie van Sociale Zaken en Werkgelegenheid (n = 59)

% adoptie per standaard 'anti-phishing' Ministerie van Sociale Zaken en Werkgelegenheid (n = 59)

% adoptie per standaard 'veilig e-mailtransport' Ministerie van Sociale Zaken en Werkgelegenheid (n = 13)

6.14. Ministerie van Volksgezondheid, Welzijn en Sport

% adoptie per webbeveiligingsstandaard Ministerie van Volksgezondheid, Welzijn en Sport (n = 331)

% adoptie per standaard 'anti-phishing' Ministerie van Volksgezondheid, Welzijn en Sport (n = 334)

% adoptie per standaard 'veilig e-mailtransport' Ministerie van Volksgezondheid, Welzijn en Sport (n = 168)

7. Achtergrond

Sinds 2015 biedt het [Platform Internetstandaarden](#) de mogelijkheid om via de website Internet.nl domeinen te toetsen op het gebruik van verschillende moderne internetstandaarden, waaronder een aantal informatieveiligheidstandaarden en IPv6, die op de ‘pas toe of leg uit’-lijst van Forum Standaardisatie staan. In datzelfde jaar is Forum Standaardisatie gestart om met behulp van Internet.nl een halfjaarlijkse meting van de adoptiegraad van informatieveiligheidsstandaarden voor overheidsdomeinen (web en e-mail) uit te voeren.

Die metingen hebben ertoe geleid dat het Nationaal Beraad in februari 2016 de ambitie [uitsprak](#) bepaalde standaarden versneld te willen adopteren. Dit betekent concreet dat voor deze standaarden niet langer het tempo van ‘pas toe of leg uit’ wordt gevolgd (d.w.z. wachten op een volgend investeringsmoment en dan de standaarden implementeren), maar dat actief wordt ingezet op implementatie van de standaarden op de kortere termijn.

Na de eerste interbestuurlijke afspraak zijn er door het Overheidsbreed Beleidsoverleg Digitale Overheid (OBDO) drie aanvullende streefbeeldafspraken met verschillende uiterlijke implementatiedeadlines gemaakt. Van websites en e-mail van de overheid wordt vereist dat deze na het verlopen van de deadlines aan de standaarden en juiste configuratie voldoet.

Onderdeel van de afspraken is dat Forum Standaardisatie de voortgang van de adoptie meet en inzichtelijk maakt. De halfjaarlijkse Meting Informatieveiligheidstandaarden is ook onderdeel van de jaarlijkse [Monitor Open Standaarden](#).

7.1. Om welke standaarden gaat het

Het Nationaal Beraad en het OBDO hebben [streefbeeldafspraken](#) gemaakt met betrekking tot de volgende standaarden:

UITERLIJKE IMPLEMENTATIE-DATUM	STANDAARDEN
EIND 2017	HTTPS en TLS : beveiligde verbindingen van website ‘met gevoelige gegevens’ DNSSEC : integriteit domeinnaam-gegevens SPF : echtheidswaarmerk ter preventie mailspoofing DKIM : echtheidswaarmerk ter preventie mailspoofing DMARC : beleid en rapportage ter preventie mailspoofing

EIND 2018	<u>HTTPS, TLS en HSTS</u> conform de <u>TLS-richtlijnen van NCSC</u> : beveiligde verbindingen van <u>alle</u> websites
EIND 2019	<u>STARTTLS en DANE</u> : encryptie van mailverkeer <u>SPF</u> en <u>DMARC</u> : het instellen van strikt beleid voor deze emailstandaarden
EIND 2021	<u>IPv6 (naast IPv4)</u> : moderne internetadressering van overheidswebsites en e-maildomeinen van e overheid

7.2. Om welke internetdomeinen gaat het

In totaal zijn in deze meting 2584 internetdomeinen van overheidsorganisaties getoetst, bestaande uit:

- Alle internetdomeinen uit het Websiteregister Rijksoverheid;
- Alle internetdomeinen uit het Register van Overheidsorganisaties op [organisaties.overheid.nl](#);
- Internetdomeinen uit voorgaande metingen.

De lijst betreft een selectie van alle overheidsdomeinnamen. De lijst is niet volledig en kan dat ook niet zijn omdat de overheid momenteel geen overzicht heeft over alle domeinnamen. De gemeten internetdomeinen zijn bij lange na niet alle domeinen waar het OBDO direct en indirect voor verantwoordelijk is. Zo heeft het ministerie van AZ zicht op meer dan 9.000 internetdomeinen van de Rijksoverheid waarvan het overzicht niet openbaar is gepubliceerd. Een 100%-score op de gemeten domeinen garandeert geenszins dat hiermee *alle* overheidsdomeinen beschermd zijn tegen bijvoorbeeld phishing.

7.3. Hoe wordt gemeten

De meting geeft de stand van zaken weer van mei 2022. De meting laat zien of op een domeinnaam de standaarden worden toegepast. De resultaten zijn voorgelegd aan een aantal koepelorganisaties en stakeholders en begin juli geactualiseerd indien nodig.

De meting wordt uitgevoerd middels een bulktoets via de API van Internet.nl. Voor de webstandaarden wordt het hoofddomein getoetst met de toevoeging www. (dus: [www.forumstandaardisatie.nl](#)), omdat het gebruikelijk is dat de website daarop bereikbaar is. Voor de maildomeinen wordt getoetst zonder enig voorvoegsel omdat dat doorgaans gebruikt wordt als e-maildomein (dus @forumstandaardisatie.nl).

Op Internet.nl is eenvoudig te testen of een website of e-mail een aantal moderne internetstandaarden ondersteunen, ook de standaarden waarover streefbeeldafspraken zijn gemaakt zijn onderdeel van de test. De score die een domeinnaam op Internet.nl kan halen (namelijk max. 100%) heeft een directe relatie met het resultaat uit deze meting, aangezien deze meting alle standaarden bevat die de Internet.nl score kunnen beïnvloeden.

De website Internet.nl is een initiatief van het Platform Internetstandaarden. In het platform participeren verschillende partners uit de internetgemeenschap (zoals Internet Society, RIPE NCC, SIDN en SURFnet) en Nederlandse overheid (Forum Standaardisatie, het Ministerie van Economische Zaken en Klimaat, en NCSC). Het uitgangspunt is dat Internet.nl de adviezen van Forum Standaardisatie en NCSC met betrekking tot de Internetstandaarden volgt.

De meting geeft geen inzicht in het risiconiveau van een bepaald domein. Zo is het aannemelijk dat de aantrekkelijkheid van misbruik hoger is bij domeinen van grote uitvoerders (zoals *phishing* met aanmaningen) dan bij domeinen van kleine gemeenten.

7.4. Wat wordt niet gemeten

In de meting wordt alleen gekeken naar de toepassing van standaarden op domeinnamen. Er wordt in de meting (nog) niet gekeken naar de validatie op de standaarden. Dat betekent dat de volgende zaken niet worden gemeten:

- validatie van DNSSEC door de DNS-resolver van een overheidsorganisatie;
- validatie van de DMARC-, DKIM- en SPF-kenmerken door ontvangende mailservers van een overheidsorganisatie;
- validatie van DANE-kenmerken door verzendende mailservers van een overheidsorganisatie.

7.5. Over de standaarden

Er worden zowel web- als mailstandaarden gemeten. Hieronder per standaard een korte uitleg over wat deze doet. Overigens is meer (technische) informatie over wat er wordt getoetst te vinden op Internet.nl.

7.5.1. Webstandaarden

Wij meten het gebruik van de beveiligingsstandaarden en IPv6 voor het web ook op domeinen die alleen gebruikt worden voor mail omdat dit vaak wel domeinnamen zijn die re-directen naar het hoofddomein. Ook hiervoor moeten de standaarden juist worden toegepast en burgers weten vaak niet hoe deze domeinen worden gebruikt. Als redirects worden toepast dan moeten ook de doorverwijzende domeinen met HTTPS beveiligd zijn, anders is de beginschakel niet veilig en daarmee is ook de gehele keten onveilig. Dit geldt ook wanneer een zogenaamde 'parking page' wordt getoond. Alleen als een geregistreerd domein geen webpagina bevat dan is HTTPS niet nodig (en niet mogelijk).

STANDAARD BESCHRIJVING

DNSSEC	Domain Name System (DNS) is het registratiesysteem van namen en bijbehorende internetnummers en andere domeinnaam-informatie. Het is vergelijkbaar met een telefoonboek. Dit systeem kan worden gevraagd om namen naar nummers te vertalen en omgekeerd. Er is getest of de domeinnaam ondertekend is met DNSSEC, zodat de integriteit van de DNS-informatie is beschermd. De streefbeeldafspraak was om hier vóór 2018 aan te voldoen.
TLS NCSC	CF. Als een bezoeker een onbeveiligde HTTP-verbinding heeft met een website, dan kan een kwaadwillende eenvoudig gegevens onderweg afluisteren of aanpassen, of zelfs het contact volledig overnemen. TLS behoort bovendien zodanig geconfigureerd te zijn dat deze voldoet aan de aanbevelingen van het Nationaal Cyber Security Center (NCSC). Zodat de vertrouwelijkheid, de authenticiteit en integriteit van een bezoek aan een website is gegarandeerd. De streefbeeldafspraak was om hier voor 2019 aan te voldoen.
HTTPS REDIRECT	Er wordt getest of een webserver bezoekers automatisch doorverwijst van HTTP naar HTTPS op dezelfde domeinnaam óf dat deze ondersteuning biedt voor alleen HTTPS en niet voor HTTP. Op Internet.nl heet deze subtest 'HTTPS Redirect'. De streefbeeldafspraak was om hier voor 2019 aan te voldoen.
HSTS	HSTS zorgt ervoor dat een browser eist dat een website altijd HTTPS blijft gebruiken na het eerste contact over HTTPS. Dit helpt voorkomen dat een derde -bijvoorbeeld een kwaadaardige WiFi hotspot- een browser kan omleiden naar een valse website. Door HTTPS samen met HSTS te gebruiken wordt het gebruik van beveiligde verbindingen zoveel mogelijk afgedwongen. De streefbeeldafspraak was om hier vóór 2019 aan te voldoen.
IPV6 WEB	Internet Protocol versie 6 (IPv6) maakt communicatie van data tussen ICT-systemen op het Internet mogelijk. Er wordt getest of alle nameservers (minimaal twee) en tenminste één webserver een IPv6-adres hebben en bereikbaar zijn. Er wordt ook getest of de IPv6 website gelijk lijkt aan de IPv4 website. De streefbeeldafspraak was om hier vóór 2022 aan te voldoen.

7.5.2. E-mailstandaarden

Wij meten het gebruik van anti-phishing standaarden ook op domeinen waarvan een organisatie geen e-mail verstuurt. Dit is relevant omdat ook die domeinen worden misbruikt (burgers weten vaak niet dat deze domeinen niet door de organisatie worden gebruikt), en juist domeinen waarvandaan niet gemaild wordt, makkelijk kunnen worden geblokkeerd met behulp van SPF en DMARC (met respectievelijk de policies -all en p=reject).

STANDAARD BESCHRIJVING

DMARC POLICY	<p>Met DMARC kan een e-mailprovider kenbaar maken hoe andere (ontvangende) mailservers om dienen te gaan met de resultaten van de SPF- en/of DKIM-controles van ontvangen e-mails. Dit gebeurt door het publiceren van een DMARC beleid in het DNS-record van een domein.</p> <p>Zolang er geen beleid is ingesteld weet de ontvanger nog niet wat te doen met verdachte e-mail. De configuratie moet op orde zijn. (Opm: Actieve policies zijn ~all en -all voor SPF, en p=quarantine en p=reject voor DMARC)</p> <p>Er wordt gecontroleerd of de syntax van de DMARC-record correct is en of deze een voldoende strikte policy bevat. De streefbeeldafspraak was om hier voor 2020 aan te voldoen.</p>
DKIM	<p>Met DKIM kunnen e-mailberichten worden gewaarmerkt. De ontvanger van een e-mail kan op die manier controleren of een e-mailbericht écht van de afzender afkomstig is en of het bericht onderweg ongewijzigd is gebleven.</p> <p>Getest wordt of de domeinnaam DKIM ondersteunt. Voor non-mail domeinen waar dit goed is ingesteld heeft DKIM verder geen toegevoegde waarde. In de meting wordt dit weergegeven middels de score "NVT" (niet van toepassing) voor DKIM. De streefbeeldafspraak was om hier voor 2018 aan te voldoen.</p>
SPF POLICY	<p>SPF heeft als doel spam te verminderen. SPF controleert of een verzendende mailserver die e-mail namens een domein wil versturen, ook daadwerkelijk gerechtigd is om dit te mogen doen.</p> <p>Getest wordt of de syntax van de SPF-record geldig is en of deze een voldoende strikte policy bevat om misbruik van het domein door phishers en spammers tegen te gaan. De streefbeeldafspraak was om hier voor 2020 aan te voldoen.</p>

STARTTLS CF. NCSC

STARTTLS in combinatie met DANE gaan het afluisteren of manipuleren van mailverkeer tegen. STARTTLS maakt het mogelijk om transportverbindingen tussen e-mailservers op basis van certificaten met TLS te beveiligen.

Net zoals bij HTTPS kan er bij STARTTLS gebruik worden gemaakt van verschillende versies van het TLS en verschillende versleutelingsstandaarden (ciphers). Aangezien niet alle versies en combinaties als voldoende veilig worden beschouwd, is het belangrijk om hierin de juiste keuze te maken en ook regelmatig te controleren of de gebruikte instellingen nog veilig zijn.

Getest wordt of STARTTLS is geconfigureerd zoals door het NCSC is [aanbevolen](#). De streefbeeldafspraak was om hier vóór 2020 aan te voldoen.

DANE

DANE, dat voortbouwt op DNSSEC, zorgt er in combinatie met STARTTLS voor dat een verzendende e-mailserver de authenticiteit van een ontvangende e-mailserver kan controleren en het kan het gebruik van TLS bovendien afdwingen.

Getest wordt of de nameservers van de mailservers één of meer TLSA-records voor DANE bevatten. De streefbeeldafspraak was om hier voor 2020 aan te voldoen.

DNSSEC MX

DNSSEC is een randvoorraarde voor het instellen van DANE. Daarom wordt getest of de domeinnamen van de mailservers (MX) ondertekend zijn met DNSSEC. Dit in het kader van de streefbeeldafspraak om voor 2020 STARTTLS en DANE te ondersteunen.

IPV6 E- MAIL

Internet Protocol versie 6 (IPv6) maakt communicatie van data tussen ICT-systemen op het Internet mogelijk. Er wordt getest of alle nameservers (minimaal twee) van het e-maildomein en alle mailservers (MX) een IPv6-adres hebben en bereikbaar zijn. De streefbeeldafspraak was om hier vóór 2022 aan te voldoen.

Bijlage: individuele resultaten per internetdomein

Op de volgende pagina's staan de onderliggende individuele testresultaten van de Meting Informatieveiligheidstandaarden voorjaar 2022 (peildatum mei 2022). Eventuele onvolkomenheden of testfouten kunnen worden doorgegeven via info@forumstandaardisatie.nl.

Toelichting op de meting en de standaarden is te vinden in hoofdstuk 7 van het hoofdrapport. De test is uitgevoerd met testtool Internet.nl.

Toelichting resultaten

Resultaat	Toelichting
failed	De standaard is niet (of niet juist) toegepast.
passed	De standaard is toegepast.
warning / warning_not_tested	De standaard is niet optimaal geconfigureerd, maar het betreft een aanbeveling en geen verplichting.
info / info_not_tested	De standaard is niet optimaal geconfigureerd, maar het betreft een optionele configuratie en geen verplichting.
not_tested / no_mx	Bij de mailtest geeft dit resultaat aan dat er geen ontvangende mailserver (MX) is geconfigureerd, waardoor de standaard niet van toepassing is.
not_applicable	Bij de mailtest geeft dit resultaat aan dat vanwege de goede configuratie van DMARC en SPF de standaard DKIM niet van toepassing is (resultaat niet relevant).
error / unreachable / untestable	Door technische omstandigheden is de server niet bereikbaar (geen resultaat). Oorzaak is mogelijk een configuratiefout of rate limiting.

Webstandaarden	Toelichting
DNSSEC	Is DNSSEC aanwezig
HSTS	Is HSTS aanwezig?
HTTPS redirect	Wordt het gebruik van HTTPS afgedwongen of kan de site ook nog bezocht worden via HTTP?
TLS NCSC web	Is TLS aanwezig en optimaal veilig geconfigureerd volgens de aanbevelingen van het NCSC?
IPv6 web	Is de website volledig bereikbaar via IPv6?

E-mailstandaarden	Toelichting
DKIM	Is DKIM aanwezig?
SPF policy	Is SPF aanwezig en is het strikt geconfigureerd? (~all of -all)
DMARC policy	Is DMARC aanwezig en is het strikt configueerd? (p=quarantine of p=reject)
DNSSEC MX	Is DNSSEC aanwezig op de mailserver?
DANE	Is DANE aanwezig (TLSA record op het MX domein)?
STARTTLS NCSC	Is STARTTLS aanwezig en optimaal veilig geconfigureerd volgens de aanbevelingen van het NCSC?
IPv6 mail	Is de e-mailserver volledig bereikbaar via IPv6?

2a Verwijdering COINS

Vergadering:	Overheidsbreed Beleidsoverleg Digitale Overheid donderdag 1 december 2022
Documentnummer:	2a
Aan:	Overheidsbreed Beleidsoverleg Digitale Overheid
Van:	Forum Standaardisatie
Datum:	donderdag 1 december 2022
Versie:	1.0
Bijlagen:	FS-20220420.5B-Forumadvies-COINS

Ter besluitvorming

Forumadvies COINS

Het OBDO stemt in om:

de standaard **COINS** (gegevensuitwisseling in de bouw) niet meer te verplichten of aan te bevelen aan de overheid via verwijdering van de 'pas toe of leg uit'-lijst

Advies en samenvatting

Het Forum Standaardisatie adviseert om de standaard COINS (gegevensuitwisseling in de bouw) niet meer te verplichten of aan te bevelen aan de overheid via verwijdering van de 'pas toe of leg uit'-lijst. [COINS](#) is een standaard voor uitwisselen van samenhangende digitale bouwinformatie tussen opdrachtgevers en opdrachtnemers.

COINS 2.0 heeft *end of life*-status bereikt. De beheerorganisatie BIM-loket doet geen investeringen meer in de doorontwikkeling en in het beheer van de standaard. Experts signaleren dat (internationale) opvolgers beschikbaar zijn. Vanuit gebruikersperspectief neemt draagvlak voor de standaard af. Belangrijke stakeholders uit de overheid zijn het gebruik van de standaard aan het afbouwen.

Experts onderschrijven wel het nut van een standaard voor het uitwisselen van verschillende soorten bouwinformatie in samenhang. Experts adviseren het BIM Loket potentiële opvolgers aan te melden voor de Lijst Open Standaarden van Forum Standaardisatie.

Het [Forumadvies](#) geeft een nadere onderbouwing.

Belang van de standaard: betere gegevensuitwisseling en leveranciersonafhankelijkheid

COINS draagt bij aan betere gegevensuitwisseling doordat COINS systeemonafhankelijke gegevensuitwisseling van samenhangende digitale bouwinformatie tussen opdrachtgevers en opdrachtnemers bevordert.

Dankzij COINS kunnen opdrachtgevers en opdrachtnemers die software van verschillende leveranciers gebruiken, gemakkelijker samenwerken.

Hoe is het proces verlopen?

Eind 2020 tot en met juli 2021 zijn de bouwstandaarden VISI, COINS, NLCS en IFS geëvalueerd. Het [Evaluatierapport Bouwstandaarden](#) (juli 2021) adviseerde op basis van advies van de experts COINS niet meer te verplichten aan de overheid.

Op 29 september 2021 heeft het Forum Standaardisatie het Evaluatierapport Bouwstandaarden behandeld en heeft het Forum Standaardisatie besloten op basis van het Evaluatierapport de verwijdering van COINS van de lijst open standaarden in procedure te nemen.

Op 26 november 2021 is een concept expertadvies opgesteld waarop experts in de periode van 12 tot en met 24 december 2021 schriftelijk hebben gereageerd. Aan dit expertonderzoek namen vertegenwoordigers deel uit een brede coalitie van overheid, bedrijfsleven, en koepelorganisatie.

Het Expertadvies is van 28 januari tot 25 februari 2022 ter openbare consultatie gepubliceerd op internetconsultatie.nl. De enige binnengekomen reactie onderschreef de verwijdering van COINS; de reactie is meegenomen in de eindconclusie in het Forumadvies. Op basis van het Expertadvies en de reactie uit de openbare consultatie is het Forumadvies samengesteld.

Het Forum Standaardisatie heeft op 20 april 2022 ingestemd met het Forumadvies, met het verzoek om de juridische consequenties na te gaan van de verwijdering van COINS van de 'pas toe of leg uit'-status op langlopende contracten waarin COINS werd uitgevraagd (zie onder).

Over de standaard

Met COINS (Constructieve Objecten en de Integratie van Processen en Systemen) kunnen partijen die betrokken zijn bij bouwprojecten, digitale informatie uitwisselen. De informatie-uitwisseling vindt plaats tussen verschillende IT-platforms en -omgevingen van de betrokken partijen. COINS zorgt ervoor dat verschillende soorten informatie in samenhang in één database kunnen worden vastgelegd en uitgewisseld, zoals informatie als functies, eisen- en

objectenbomen, GIS-data, 2D-tekeningen, 3D-modellen, IFC-modellen, en objecttypebibliotheek.

COINS is een uitwisselformaat, waarbij een combinatie van gegevens uitgewisseld kan worden (meerdere documenten met links onderling). Op basis van COINS kunnen verwijzingen naar documenten (inclusief metagegevens) worden geadministreerd. COINS gaat uit van een kernmodel dat een semantische beschrijving geeft van objecten, hun onderlinge relatie(s) en hun kenmerken.

Nadere toelichting verwijdering COINS i.r.t. juridische consequenties voor langlopende contracten

Het niet meer verplichten of aanbevelen van de standaard COINS aan de overheid via verwijdering van de 'pas toe of leg uit'-lijst heeft geen juridische consequenties op langlopende contracten waarin COINS werd uitgevraagd. Dat heeft Rijkswaterstaat (hierna: RWS) bevestigd. RWS is binnen de overheid een van de gebruikers van de standaard COINS. COINS is bij lopende contracten van RWS zo goed mogelijk afgebouwd en RWS vraagt COINS niet meer uit. De COINS standaard is niet meer van toepassing bij RWS, onder andere als gevolg van BIT-Toets conclusies (Bureau ICT-toetsing, nu: Adviescollege ICT-Toetsing).

Het Bureau Forum Standaardisatie heeft deze vraag rond juridische consequenties uitgezet bij RWS op advies van het Forum Standaardisatie.

2b Verwijdering OWMS

Vergadering:	Overheidsbreed Beleidsoverleg Digitale Overheid donderdag 1 december 2022
Documentnummer:	2b
Aan:	Overheidsbreed Beleidsoverleg Digitale Overheid
Van:	Forum Standaardisatie
Datum:	donderdag 1 december 2022
Versie:	1.0
Bijlagen:	FS-20220928.3B-Forumadvies-Verwijdering-OWMS

Ter besluitvorming

Forumadvies OWMS

Het OBDO stemt in om:

de standaard **OWMS** (openbaarheid en toegang overheidsinformatie) niet meer te verplichten of aan te bevelen aan de overheid door verwijdering van 'pas toe of leg uit'-lijst

Advies en samenvatting

Het Forum Standaardisatie adviseert om de standaard Overheid.nl Web Metadata Standaard (OWMS) (openbaarheid en toegang overheidsinformatie) niet meer te verplichten of aan te bevelen aan de overheid via verwijdering uit de 'pas toe of leg uit'-lijst. [OWMS](#) beschrijft eigenschappen en structuur van overheidsinformatie op internet.

OWMS heeft *end of life*-status bereikt. De beheerorganisatie KOOP (Kennis- en Exploitatiecentrum Officiële Overheidspublicaties) doet geen investeringen meer in de doorontwikkeling en in het beheer van de standaard. Er is geen draagvlak voor het gebruik van OWMS voor nieuwe toepassingen omdat KOOP OWMS gaat vervangen voor de nieuwe standaard Thesaurus en Ontologie OverheidsInformatie (TOOI).

Experts adviseren om duidelijk te communiceren dat de standaard na verwijdering nog steeds gebruikt kan worden.

Het [Forumadvies](#) geeft een nadere onderbouwing.

Belang van de standaard: meer toegang en openbaarheid

OWMS draagt bij aan meer toegang en openbaarheid van overheidsinformatie doordat burgers en bedrijven overheidsinformatie beter kunnen vinden en interpreteren.

OWMS bevordert deze vindbaarheid door overheidsinformatie op een eenduidige manier te beschrijven en te ordenen. Het gaat om informatie die de overheid op het internet publiceert, zoals artikelen, kamerstukken, bekendmakingen en formulieren.

Hoe is het proces verlopen?

Het Forum Standaardisatie heeft op 7 oktober 2020 groen licht gegeven om de [procedure](#) te starten om OWMS niet meer te verplichten of aan te bevelen. Uit gezamenlijk onderzoek van Bureau Forum Standaardisatie en KOOP bleek dat het niet haalbaar was om de verwijdering van OWMS te combineren met de aanmelding van TOOI in één gezamenlijke procedure. Op 3 mei 2022 kwam de expertgroep bijeen voor de verwijdering van OWMS. Aan dit expertonderzoek namen vertegenwoordigers deel uit een coalitie van overheids- en koepelorganisaties.

Het expertadvies is van 24 juni 2022 tot 25 juli 2022 ter openbare consultatie gepubliceerd op [internetconsultatie.nl](#). De enige binnengekomen reactie weersprak de verwijdering van OWMS. Deze reactie en de duiding ervan door de experts zijn opgenomen in de eindconclusie in het Forumadvies. Op basis van het Expertadvies en de reactie uit de openbare consultatie is het Forumadvies samengesteld.

Het Forum Standaardisatie heeft op 28 september 2022 ingestemd met het Forumadvies.

Over de standaard

OWMS (Overheid.nl Web Metadata Standaard) beschrijft eigenschappen en structuur van overheidsinformatie op het internet. De overheid produceert dagelijks ontzettend veel informatie. Deze overheidsinformatie verschilt sterk in vorm, inhoud, publiek, onderwerp, herkomst en actualiteit. Om ervoor te zorgen dat al die overheidsinformatie vindbaar is en in samenhang met andere informatie gepresenteerd kan worden, is het nodig om deze informatie te ordenen. De afspraken die de overheid hierover heeft gemaakt, zijn vastgelegd in de Overheidsbrede Web Metadata Standaard.

OWMS beschrijft met de metadata (dat wil zeggen gegevens die gegevens beschrijven) informatieobjecten die de overheid op het internet publiceert. Het doel van metadata is de eigenschappen van ongestructureerde gegevens (bijvoorbeeld de inhoud van een website) te kenmerken zodat deze meer structuur krijgen en beter te vindbaar en interpreteren zijn.

OWMS laat uitbreiding toe met eigenschappen en waarden voor specifieke toepassingen. Voor een dergelijke toepassing wordt dan een toepassingsprofiel gemaakt.
